# The IT-supported Management Office of the BOC Group

## Next Generation Business Process, GRC and Enterprise Architecture

- ▶ Enterprise Architecture Management
- ▶ TOGAF
- ▶ Capability Management
- ▶ Business-, Service- and Technology Architecture Management
- ▶ Planning, Data Gathering & Governance

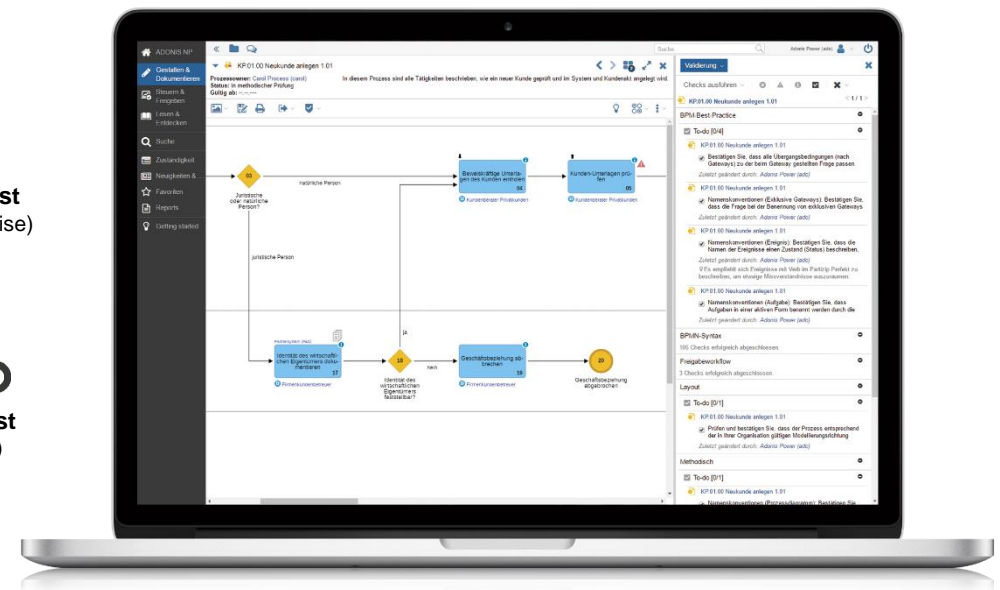

- ▶ Strategic and Operational Business Process Management
- ▶ BPMN, BPMN fit for business
- ▶ Process landscapes
- ▶ Business IT alignment, ITIL
- ▶ Governance, Risk and Compliance
- ▶ Analysis and Optimization

  
You host  
(On-Premise)

  
We host  
(SaaS)

# Our Service Portfolio – Consulting

## Business Process Management

- ▶ Design, introduction and embedding of process management
- ▶ Design of company maps and business architectures
- ▶ Design of target operating models
- ▶ Business process workshops and moderation
- ▶ Process modelling (data gathering and development)
- ▶ Process governance
- ▶ Selective process analysis and optimization
- ▶ Design and training of necessary roles
- ▶ Process measurement and control
- ▶ Change Management for all of the above

## Governance, Risk and Compliance

- ▶ Establishment of ICS in the organization
- ▶ Development of IT risk management – ISO 27K, BCM etc.
- ▶ Integration of risk and compliance management
- ▶ Integration of further management scenarios like BCM
- ▶ Training, risk and control awareness, ICS know-how

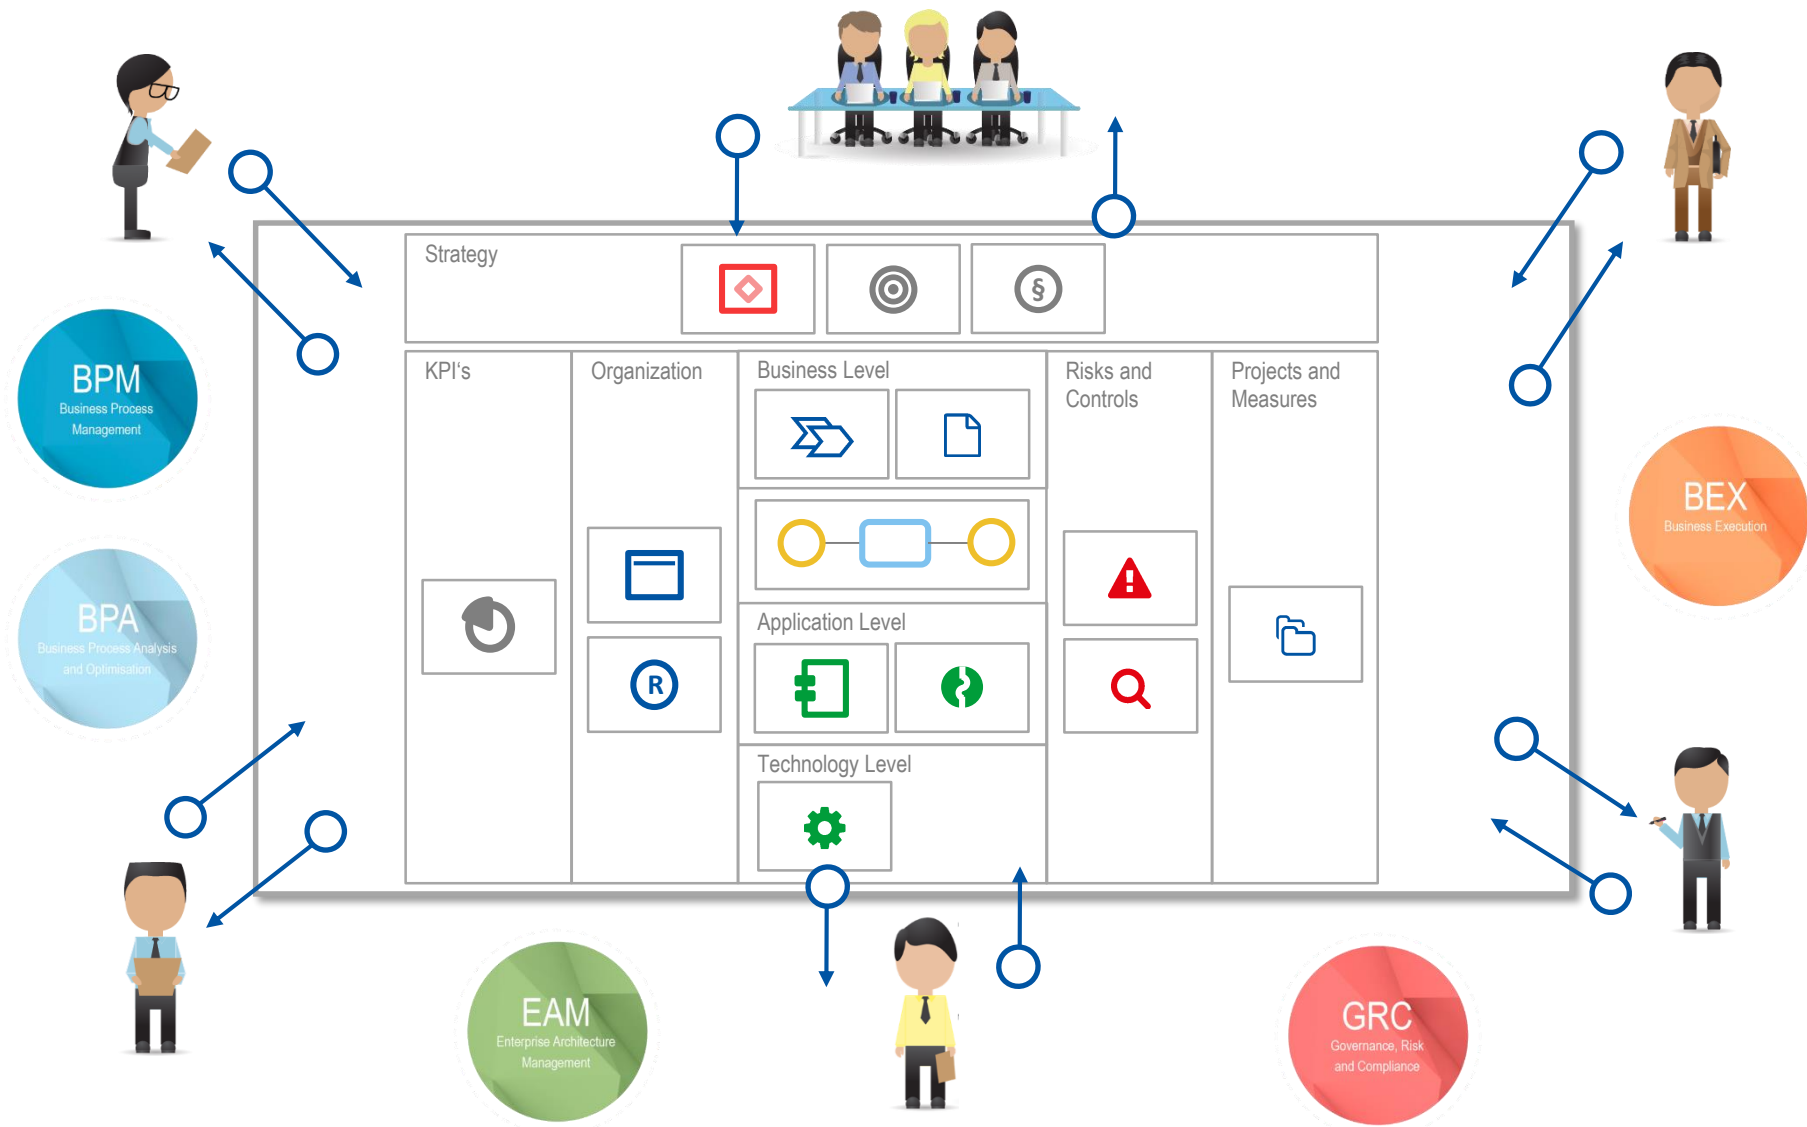

## Enterprise Architecture

- ▶ Introduction ITIL – processes and organization
- ▶ Business IT alignment
- ▶ Service Management development
- ▶ Process-based requirements management
- ▶ Development of enterprise architecture management
- ▶ Creation of capability map
- ▶ Business architecture management – IT integration
- ▶ Creation of application and service architectures
- ▶ Implementation of master data management
- ▶ Technology portfolio management

- ▶ Development and Implementation of ICS
- ▶ Identification of key risks and controls
- ▶ Control management development
- ▶ ICS governance
- ▶ Implementation of ICS reporting

# Business Transformation – Comprehensive & Integrated Support

Strategy, Business, Process, Application and Technology Architecture for all Roles

# Key Topics in 2017 & Today's Focus

## Key Criteria when selecting an EA tool

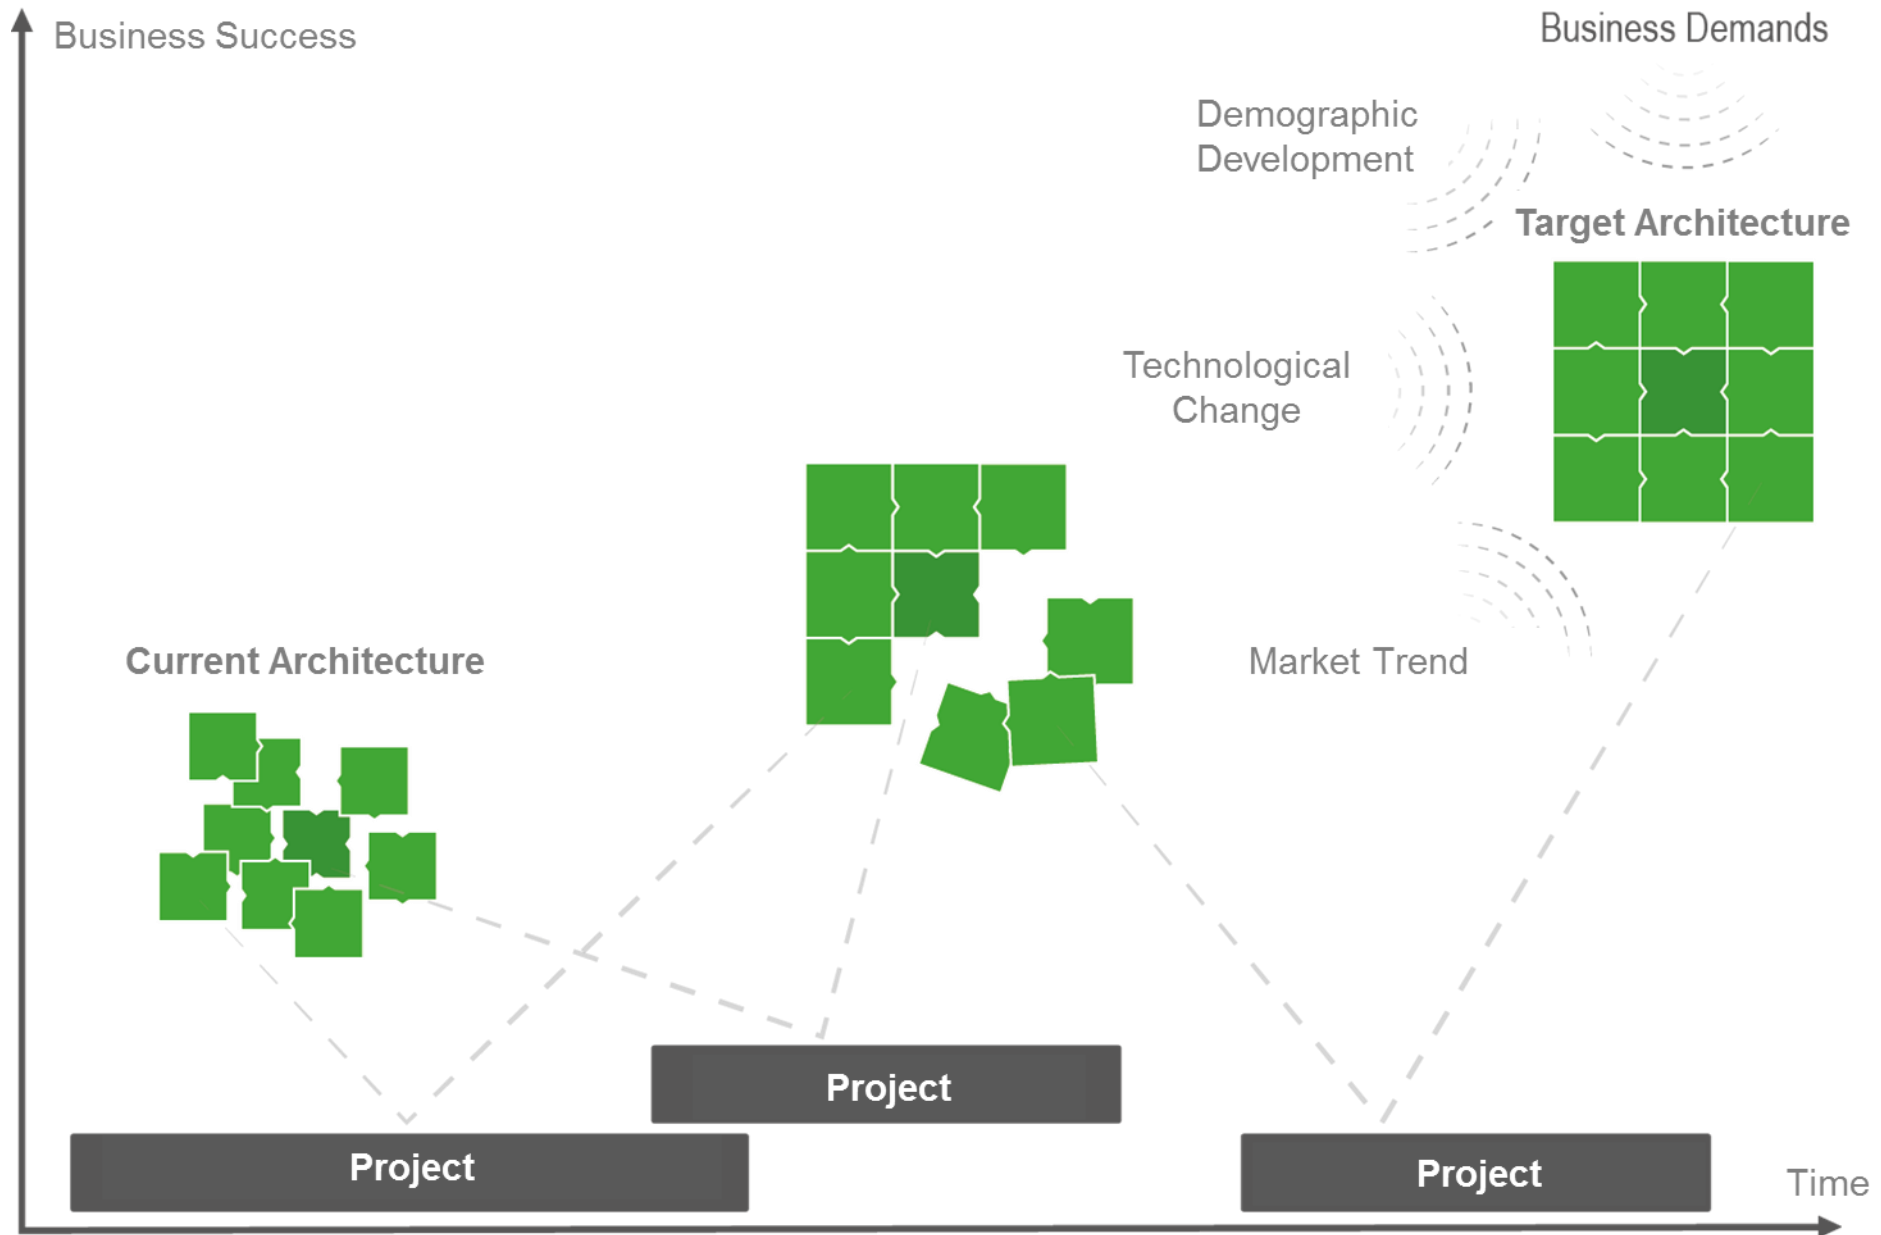

# What is EA?

Enterprise Architecture (EA) is the **process of implementing corporate vision and corporate strategy**. The focus is on the **consistent description of the relationships between the elements of the business, application and technology levels** of the company. The **collection, description and analysis of the elementary design objects** of an organisation (e.g. goals, products, capabilities, processes, risks, functions, applications) play an essential role.

# Why **use** Enterprise Architecture?

# Typical questions regarding the IT architecture

- ▶ Which applications are affected by the **version change of a technology**?

- ▶ In which part of the IT landscape is the **savings potential** located?

- ▶ In which areas do we have to improve the **quality of IT**?

# Integration with the Business Architecture

- ▶ Which **processes** are affected by an IT downtime?

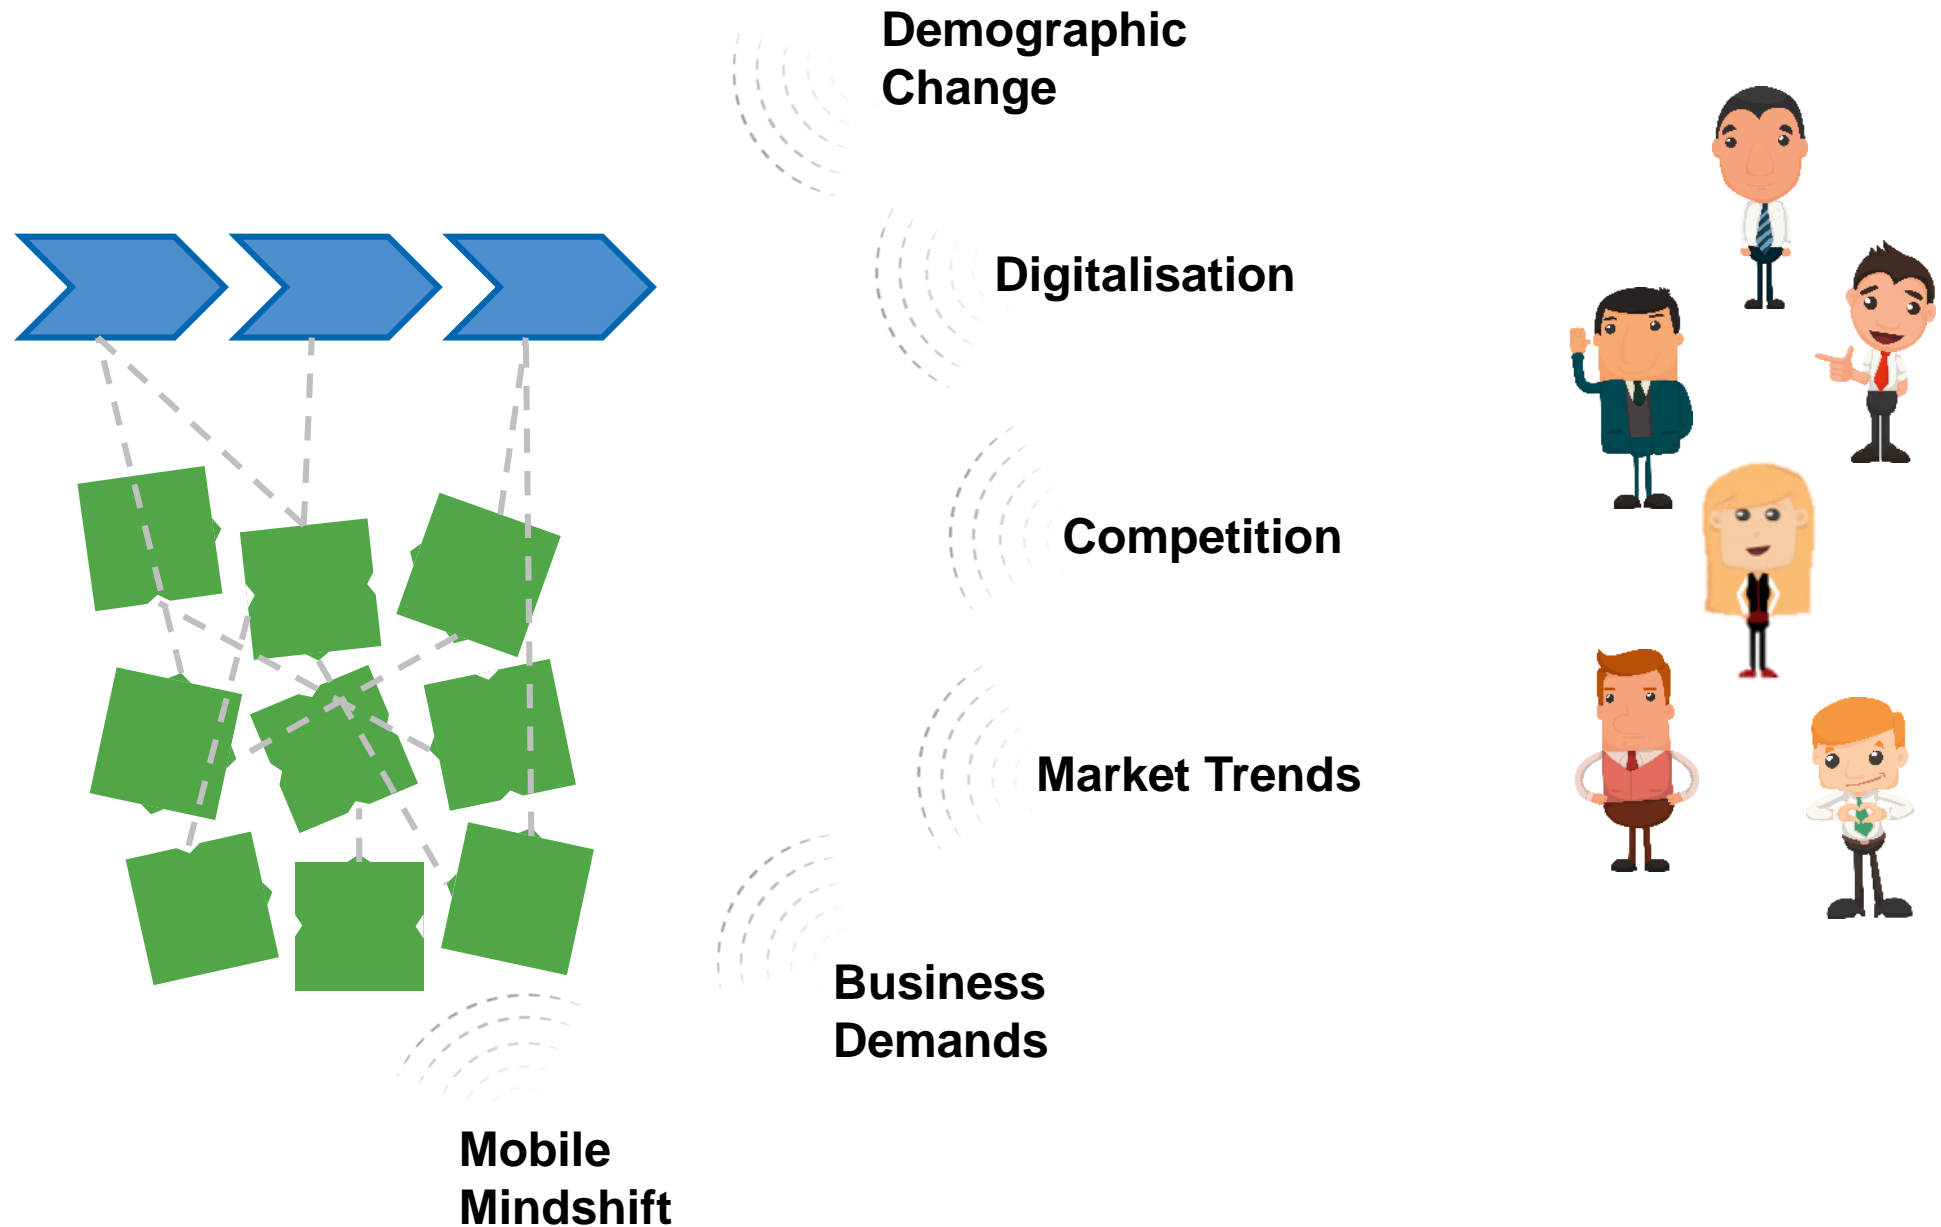

- ▶ Which IT services are subject to a **high risk level**?

- ▶ Which IT services are affected by the **process optimisations**?

# Strategic factors influencing your business

# Target points of your architecture

- ▶ How does the **future product portfolio** look like?

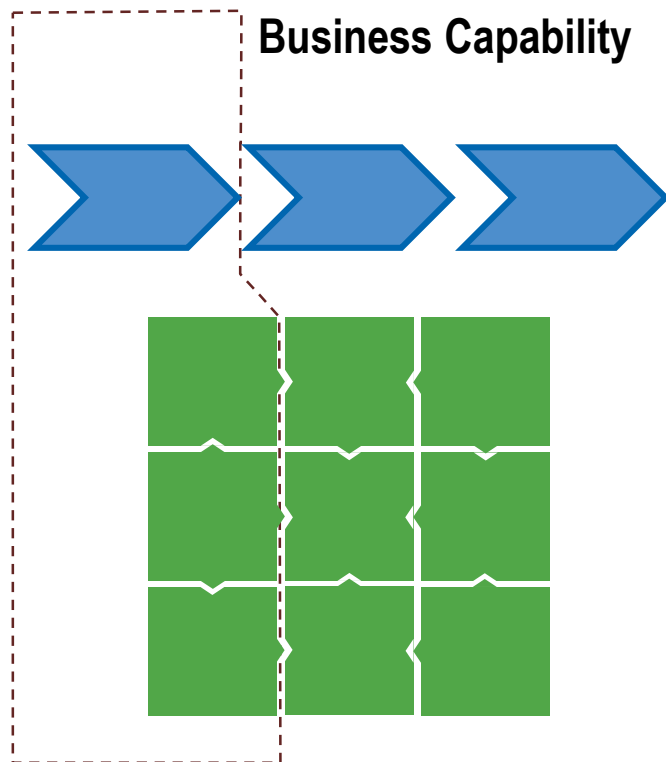

- ▶ Which technologies allow a **differentiation of our products and services** on the market?

- ▶ Through which **channels** can we improve our client loyalty?

# Essential capabilities of the company

- ▶ Which **capabilities** do we have to create?

- ▶ How does our **project portfolio** have to look like?

- ▶ ... and how can we ensure that we are heading **the right way**?

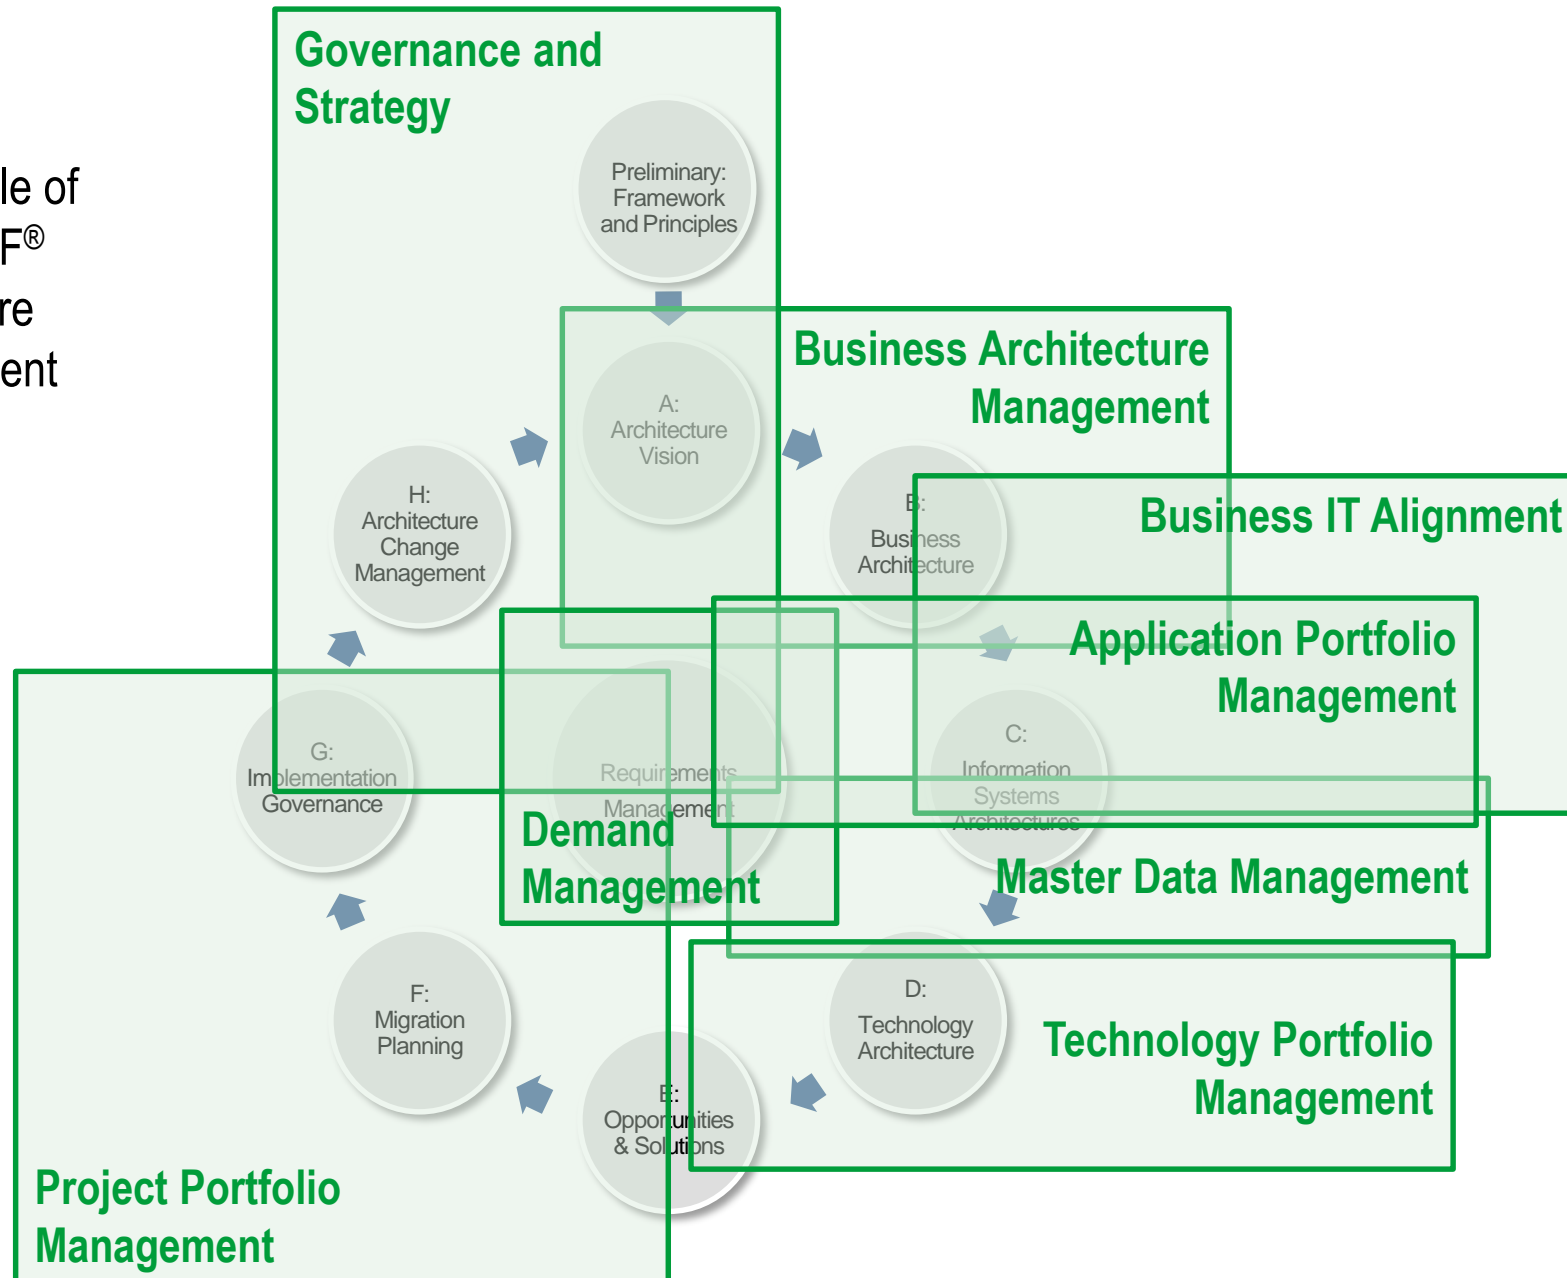

# Practical implementation of Enterprise Architecture

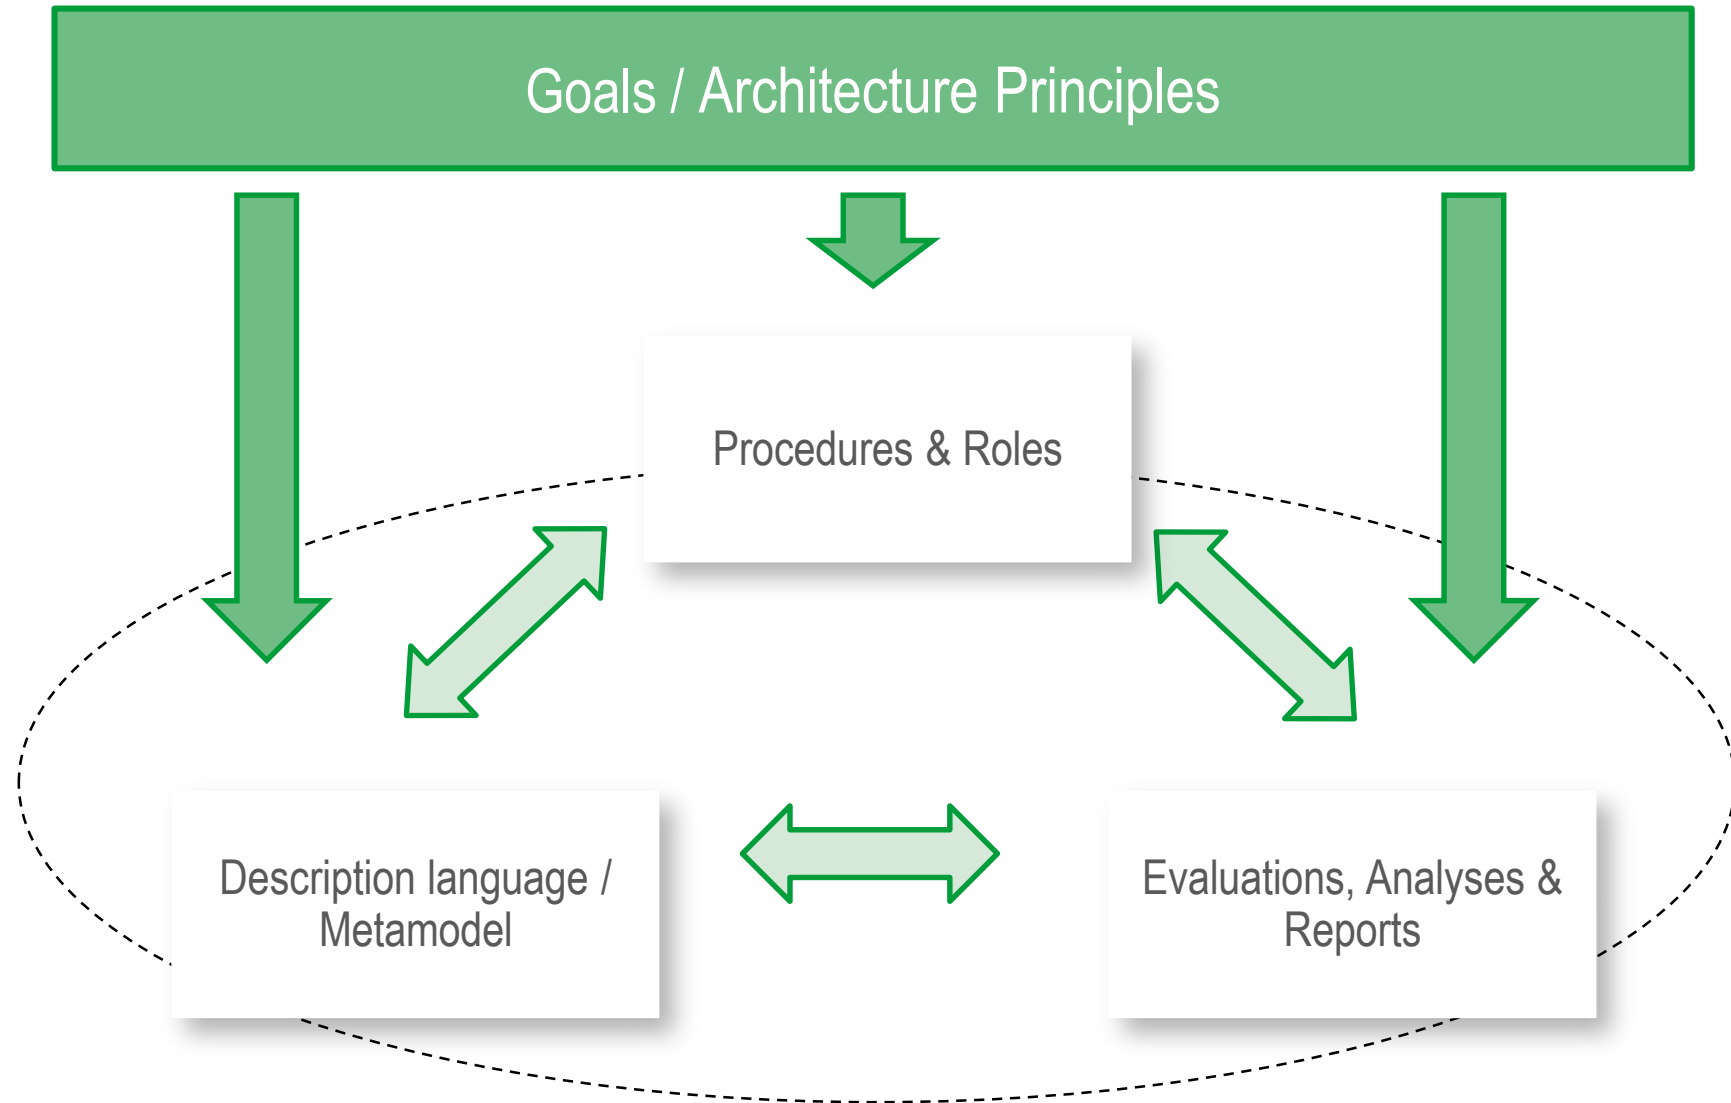

# Alignment of Enterprise Architecture

An example of the TOGAF® Architecture Development Method...

# Key elements for successful EA

# There are many tools for EA ...

... but they are fundamentally different!

## CASE tools (Application development)

- ✓ Flexible use
- ✓ Graphical modeling focus
- ✗ No role-specific views
- ✗ No EA-specific evaluations
- ✗ No support for time-based views
- ✗ No workflow / process model
- ✗ Rigid metamodel
- ✗ Only "Node and Edge Diagrams"
- ✗ Very technology-centered (software architecture)

## EA Modeling Tools

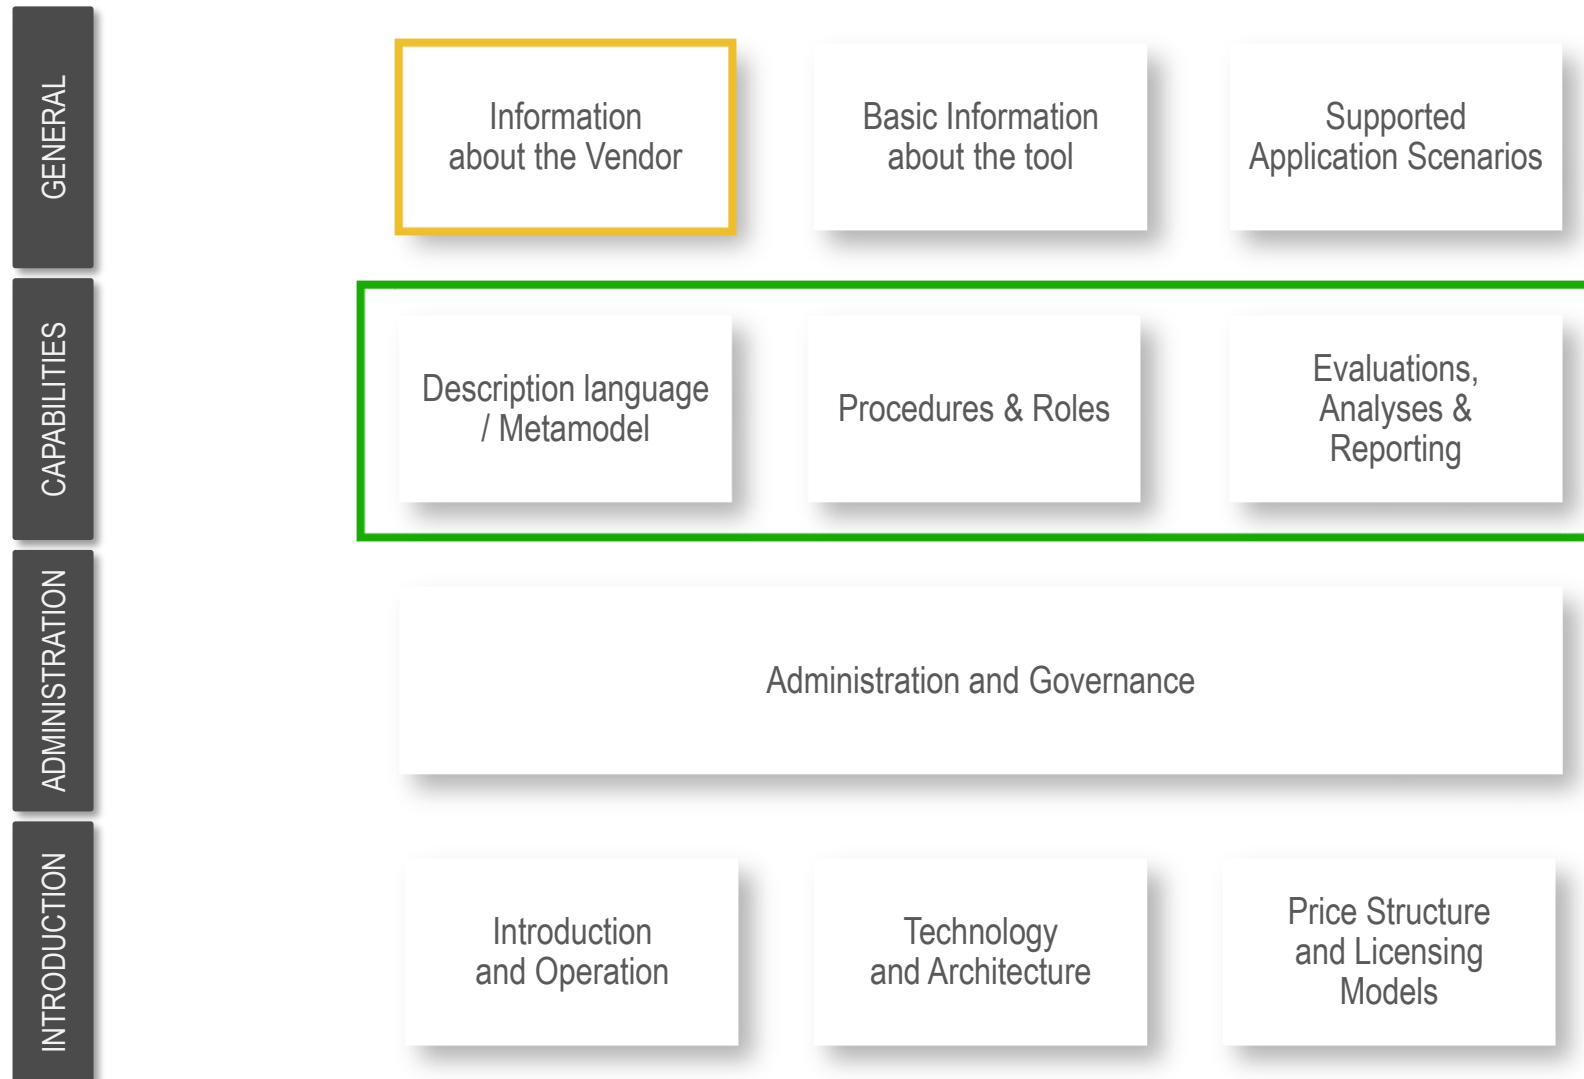

- ✓ Focus on graphical modeling
- ✓ Specialized in selected notations and methods
- ✗ No role-specific views
- ✗ No EA-specific evaluations
- ✗ No workflow / process model
- ⊕ Partially rigid metamodel
- ⊕ Adaptability of notations and methods
- ✗ Adaptations are usually very complex and not migration-stable

## EA Suites

- ✓ Multiple ways to maintain architectures
- ✓ Graphical modeling and form-based data collection
- ✓ Role-specific views
- ✓ EA-specific evaluations and reports
- ✓ Workflows / Process models
- ✓ Lifecycle Management and clear responsibilities for architectural elements
- ✓ Most flexible metamodel
- ⊕ Adaptability of notations and methods

# Other Important Criteria

Do not forget any aspect!

# Information about the Vendor

## Criteria and best practices in choosing an EA Suite

**AIM**

Vendor  
Evaluation

- ✓ Economically viable and long-term stability
- ✓ Evidence of practical, comparable experience
- ✓ Sufficient customer portfolio
- ✓ Sufficient references to comparable scenarios
- ✓ Sufficient maturity and stability of the product
- ✓ Demonstrable quality assurance in software development
- ✓ Active involvement of users, for example:
  - ✓ Using their ideas and requirements for the product roadmap
  - ✓ Regular events (local / virtual)
  - ✓ Their know-how and experience

### Ability to Execute

#### PRODUCT

Product Development  
and Adaptations

#### SUPPORT

Software Maintenance  
and Hotline

#### EDUCATE

Technical, Methodological  
and Tool Training

#### COACH

Consulting  
and Coaching

# Basic information about the tool

## Criteria and best practices in choosing an EA Suite

  
**AIM**  
Product Core  
Competencies

- ✓ Future-proof investment
- ✓ Finds acceptance among users
- ✓ Has the necessary basic skills ( "Capabilities")

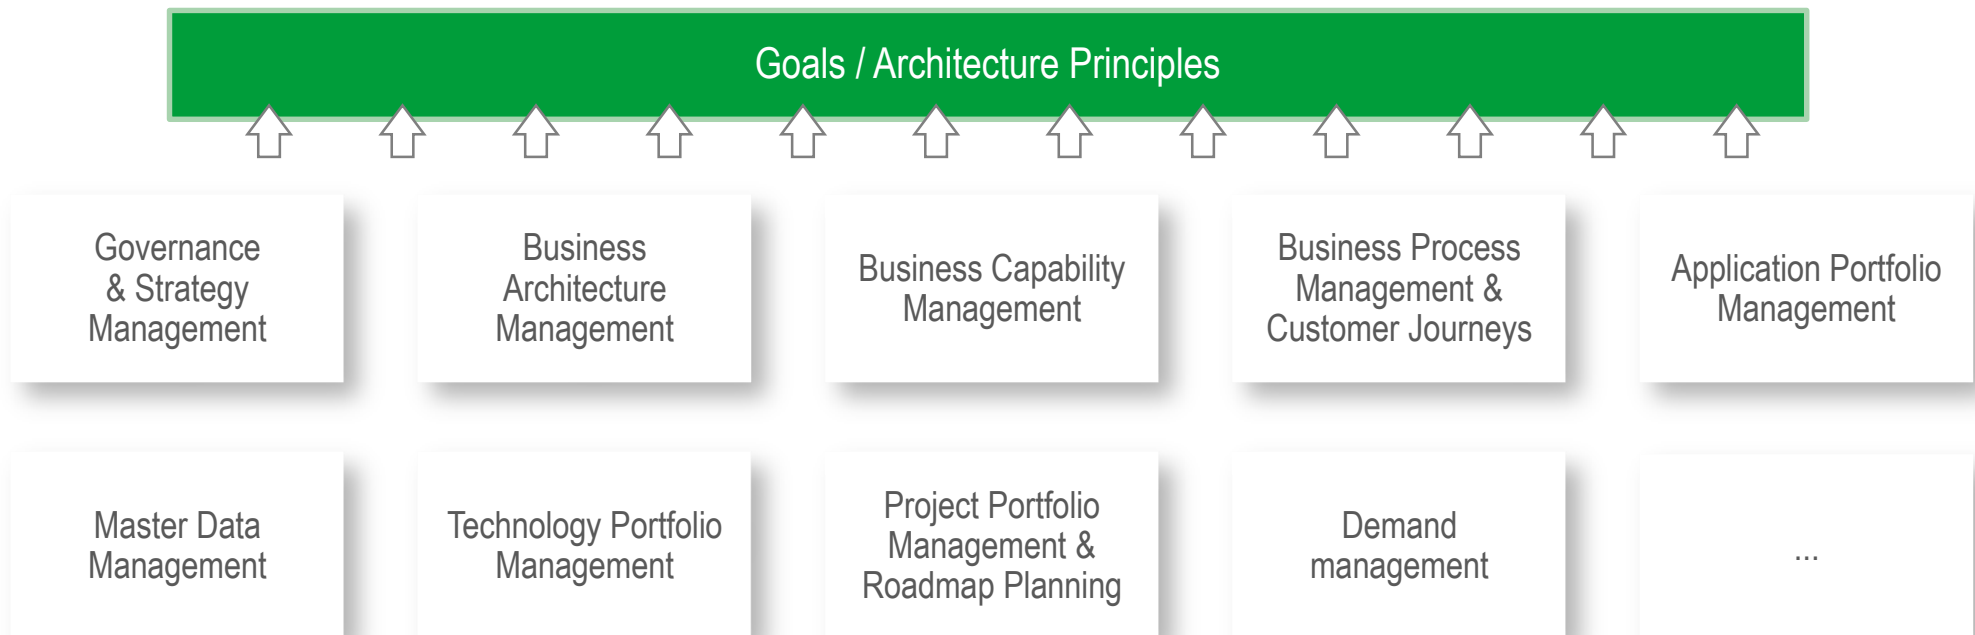

# Supported Applications Scenarios

## Criteria and best practices in choosing an EA Suite

◎  
**AIM**  
Ready for  
Upcoming  
Initiatives

- ✓ Standard tool covers all core scenarios
- ✓ Scenarios consist of
  - ✓ Metamodel for detecting and structuring of the data
  - ✓ Reports and views for the visualization and communication of the data
  - ✓ Dedicated analyzes for the evaluation of the data
- ✓ Ability to grow to support new and advanced application scenarios

# Evaluations, Analyses & Reporting (1/2)

## Criteria and best practices in choosing an EA Suite

AIM

Stakeholder-  
specific  
Analyses

- ✓ Continuous dependency analysis (from strategy to technology)
- ✓ Cluster Maps and Heat Maps (For the visualization of actions required and architecture-scorings)
- ✓ Matrix representations (for displaying master data management, or responsibilities)
- ✓ Gantt charts for the communication of roadmaps
- ✓ Portfolio presentation for evaluation of architectural elements
- ✓ Statistical evaluations / dashboards based on Business-fitness, IT-fitness, Cost-fitness of architectural elements
- ✓ Full navigation and drill-down capabilities
- ✓ Information and automated warnings about the status of architectural elements
- ✓ Analysis of architectures over time (actual, transformation and target architectures)

Standardized

Adaptable

Expandable

**Architectural views**

independently configurable

**Dashboards**

for the EA-stakeholders

**Print Reports**

on repository content

# Evaluations, Analyses & Reporting (2/2)

## Criteria and best practices in choosing an EA Suite

AIM

Publication and  
Communication

- ✓ State of the Art - Online Process Portal
- ✓ Includes extensive search to cover all published content
- ✓ Search index includes the contents of the uploaded documents
- ✓ Additional offline HTML generation available for date-related exports or offline access
- ✓ Mechanisms for feedback and suggestions for improvements
- ✓ Support of Tablets for mobile use

A collection of icons representing various dashboard components: a scatter plot, a search bar, a bar chart, three user icons, a grid, and a list. Below these is a document icon with arrows and the text 'Personalized Dashboards for a clear overview of essential data'.

**Personalized Dashboards**  
for a clear overview of essential data

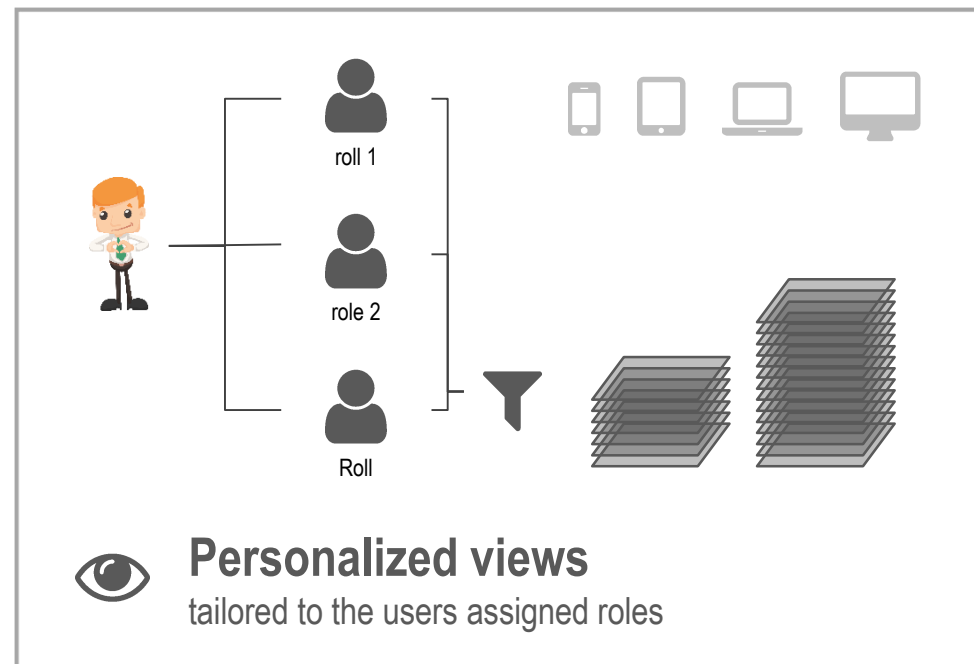

# Procedures & Roles (1/2)

## Criteria and best practices in choosing an EA Suite

- ✓ Specific scenarios for the affected stakeholders
- ✓ Preconfigured access for the affected stakeholders available
- ✓ Workflows to support the tasks
- ✓ Views / Queries / Reports of the repository independently configurable
- ✓ More complex requirements can be implemented through simple customization

# Procedures & Roles (2/2)

## Criteria and best practices in choosing an EA Suite

AIM  
Master Data  
Management &  
Validation

- ✓ Description of architecture on all levels
- ✓ Data importing options
- ✓ **Form-based data collection**
- ✓ Graphical modeling
- ✓ Consistency checks and automated validations (release workflow, Lifecycle-Information)
- ✓ Personalized views of the architectural elements
- ✓ Information and Warnings about changes made to relevant architectural elements
- ✓ Clear responsibility (ownership) over EA assets
- ✓ Feedback mechanisms on data actuality and / or architectural variants

# Description Language / Metamodel

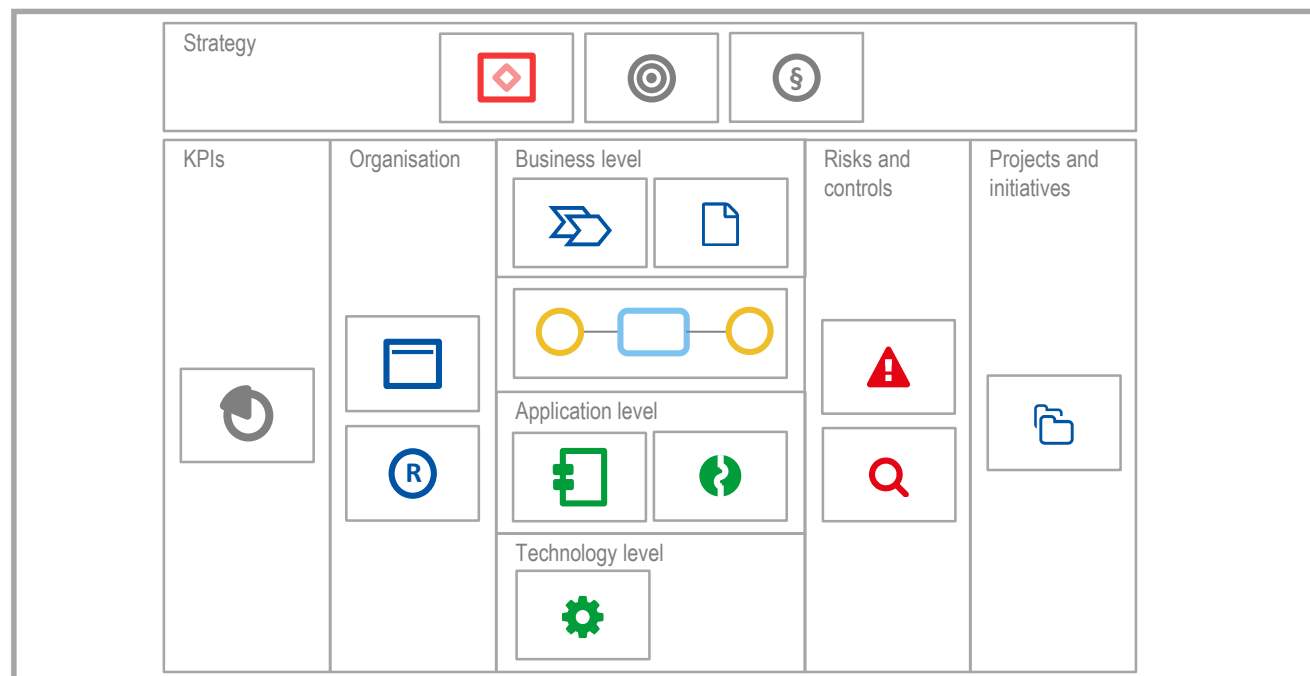

## Criteria and best practices in choosing an EA Suite

AIM

Quick start,  
Quick wins

- ✓ Predefined, manageable data model
- ✓ Based on industry standards / best practices
- ✓ Possibility to use specific extensions
- ✓ Integration with other management areas (beyond classic EA)
- ✓ Flexibly customizable data model
- ✓ Possibility of independently adapting parts of the data model (optional)
- ✓ Versatility for your customizations

# Administration & Governance

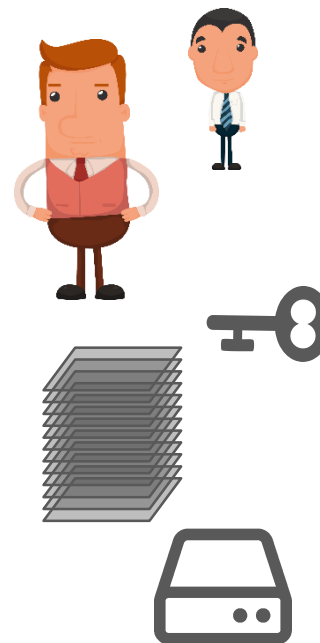

## Criteria and best practices in choosing an EA Suite

- ✓ Comprehensive authorization concepts to control access to the information in the repository
- ✓ Definition of access rights down to the attribute level to provide different access profiles for different stakeholders / organizational roles
- ✓ Differentiation of access rights from "No Access", "Read Access" and "Write Access"
- ✓ For multilingual content maintenance: translation support

### Integration Options

- ✓ Sync with LDAP directory services
- ✓ Based on the latest standards (eg. SAML)
- ✓ Configurable integrations with third party systems (Eg. HR Management)

### Data Governance

- ✓ Versioning and Release Mechanisms
- ✓ Capabilities to consolidate and (Re-) organize data

# Introduction & Operation

## Criteria and best practices in choosing an EA Suite

AIM

Successful  
Implementation  
& Operation

- ✓ Attractive support package (software maintenance, product upgrades, hotline)
- ✓ Comprehensive configuration and customizing options
- ✓ Training courses: professional, methodical and tool-training
- ✓ Manuals for end users and administrators
- ✓ Coaching & Consulting
  - ✓ Experience on implementation projects incl. References
  - ✓ Experience in the operation of the product for different customers (SaaS)
  - ✓ Experience in BPM projects for relevant application scenarios
  - ✓ Experience and references in your industry
- ✓ Availability of reference models and content (if relevant)

### External support

- ✓ Sufficient qualified personnel
- ✓ (Regional) Availability
- ✓ Request consultant profiles

# Technology and Architecture

## Criteria and best practices in choosing an EA Suite

AIM

Technically Sound  
and Well  
Prepared

- ✓ Support your existing database systems for data storage
- ✓ Scalability in terms of expected number of users, models or sets of objects
- ✓ Upgrade process: simple upgrade to latest versions
- ✓ Web capability: simple deployment and easy access via standard web browser (without plugins)
- ✓ Mobile capability: easy access to data on Tablets
- ✓ Configurability and customization: customizable to your needs
- ✓ Integration: Necessary interfaces are present, the system is open to integration (File based and online interfaces)
  - ✓ Integration with user directories (LDAP / AD, IDM, SAML), with or without Single Sign on
  - ✓ Import and export data for data exchange and for backup creation
  - ✓ Connection to your e-mail system
- ✓ Rights Management: comprehensive concepts for multi-level rights management, clients

**Sustainable investment**

technically future-proof

**Cloud (SaaS) and On Premise**

**Data Location & Scalability**

# Price Structure & Licensing Models

## Criteria and best practices in choosing a BPM Tool

  
**AIM**  
Fair License &  
Pricing Policy

- ✓ Attractive entry level options suitable for your projects
- ✓ Flexible to increase user licenses and the scope of functions
- ✓ License includes only what is actually needed, no hidden costs
- ✓ Licenses can be shared among users (or pooling "Concurrent Use")
- ✓ Options for license purchase or fully comprehensive "SaaS" package (cloud access)
- ✓ Transparent software maintenance and support

 **Fair Pricing Model**  
With attractive entry prices

 **Transparent**  
Regarding expansion levels and costs

 **No Hidden Costs**

- ✓ Transparent support packages
- ✓ Software Maintenance and Support
- ✓ New software versions without additional fees
