Why Capability-based Planning?

ADOIT
Enterprise Architecture Suite
by boc-group.com

70%

of IT leaders indicated that business capability models are the most commonly produced and referenced of all business architecture deliverables.

23.6%

of CXOs still feel that their goals are unsupported by IT.

Capability-based Planning with ADOIT

Implement it
with ADOIT in
5 steps

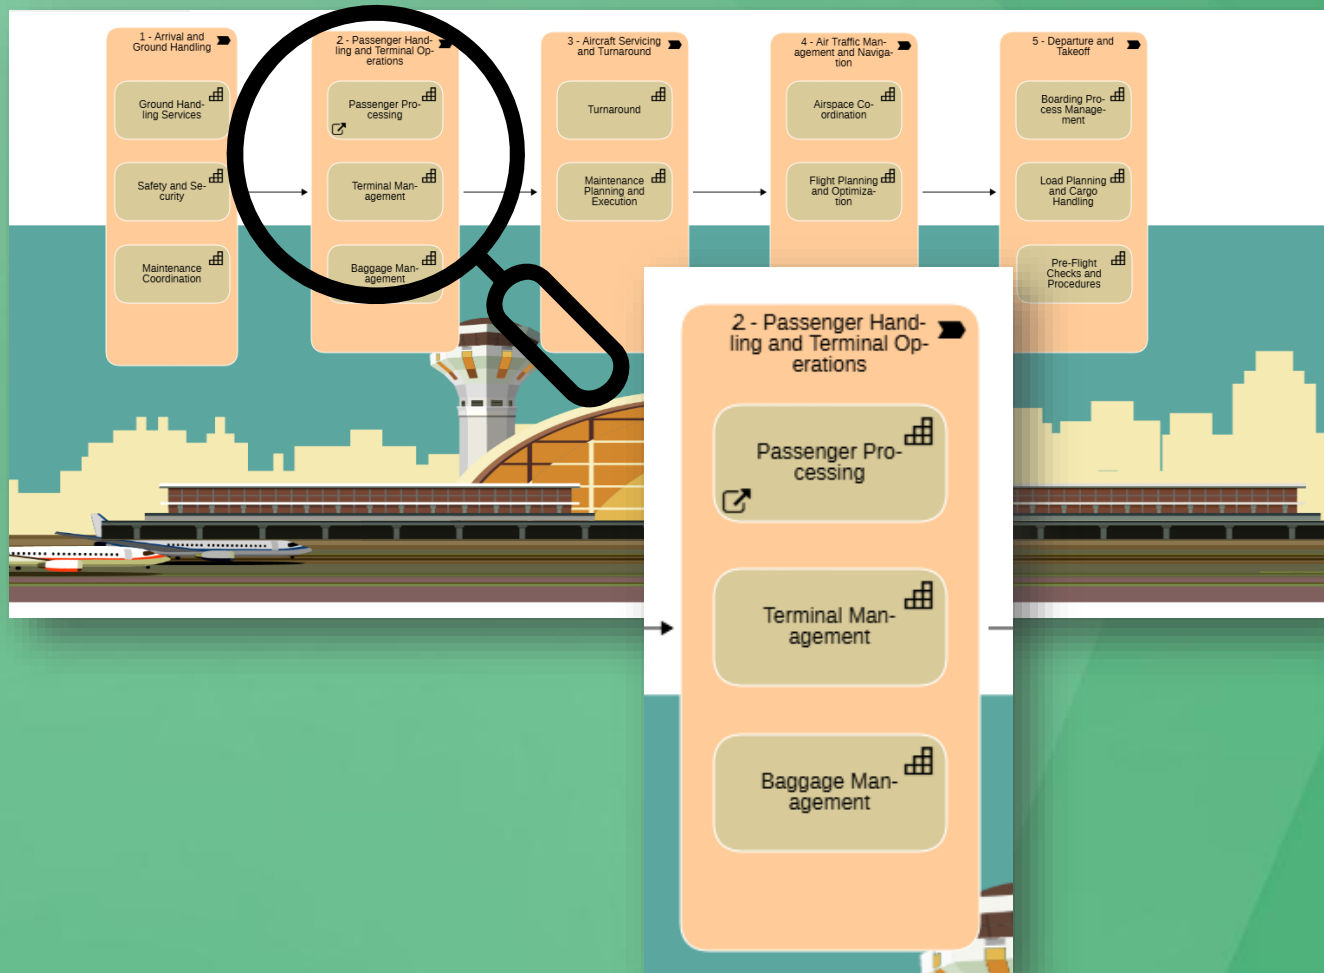

1.	Map What Matters
2.	Gain Deeper Insights
3.	Know Your Strengths
4.	Define What Needs to be Done
5.	Plan and Track Progress

1. Map What Matters

visualize your capabilities: what drives business performance.

ADOIT
Enterprise Architecture Suite

What you will achieve

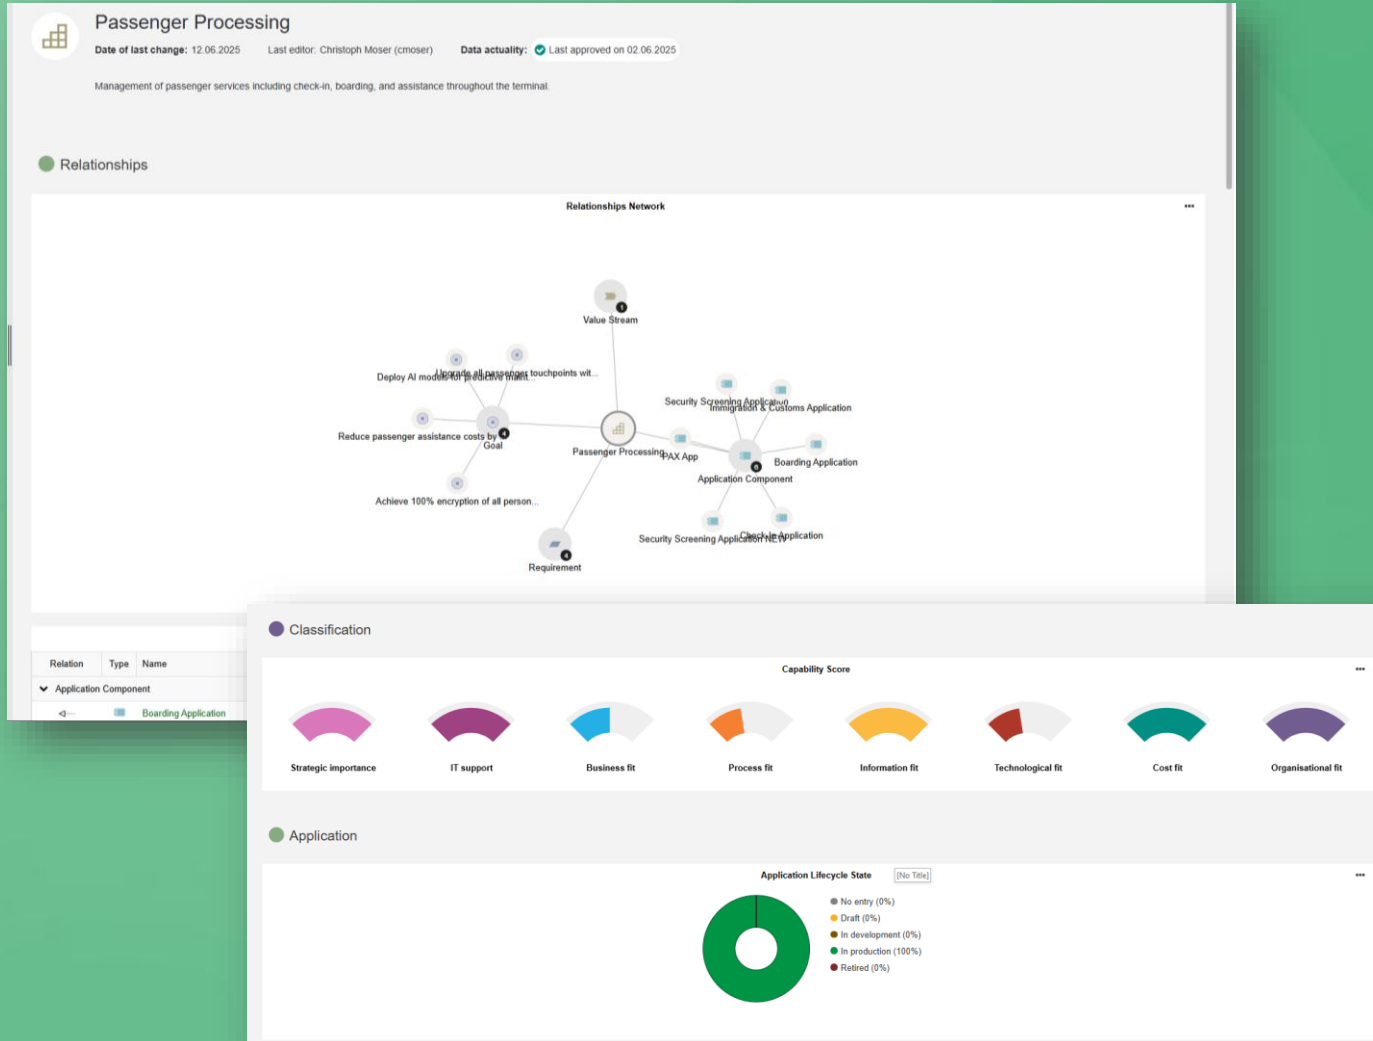

- Clear overview of business functions and value drivers
- Shared foundation for planning and prioritization

Why invest?

- Capabilities connect strategy to operations

2. Gain Deeper Insights

explore how capabilities work and interact in detail.

What you will achieve

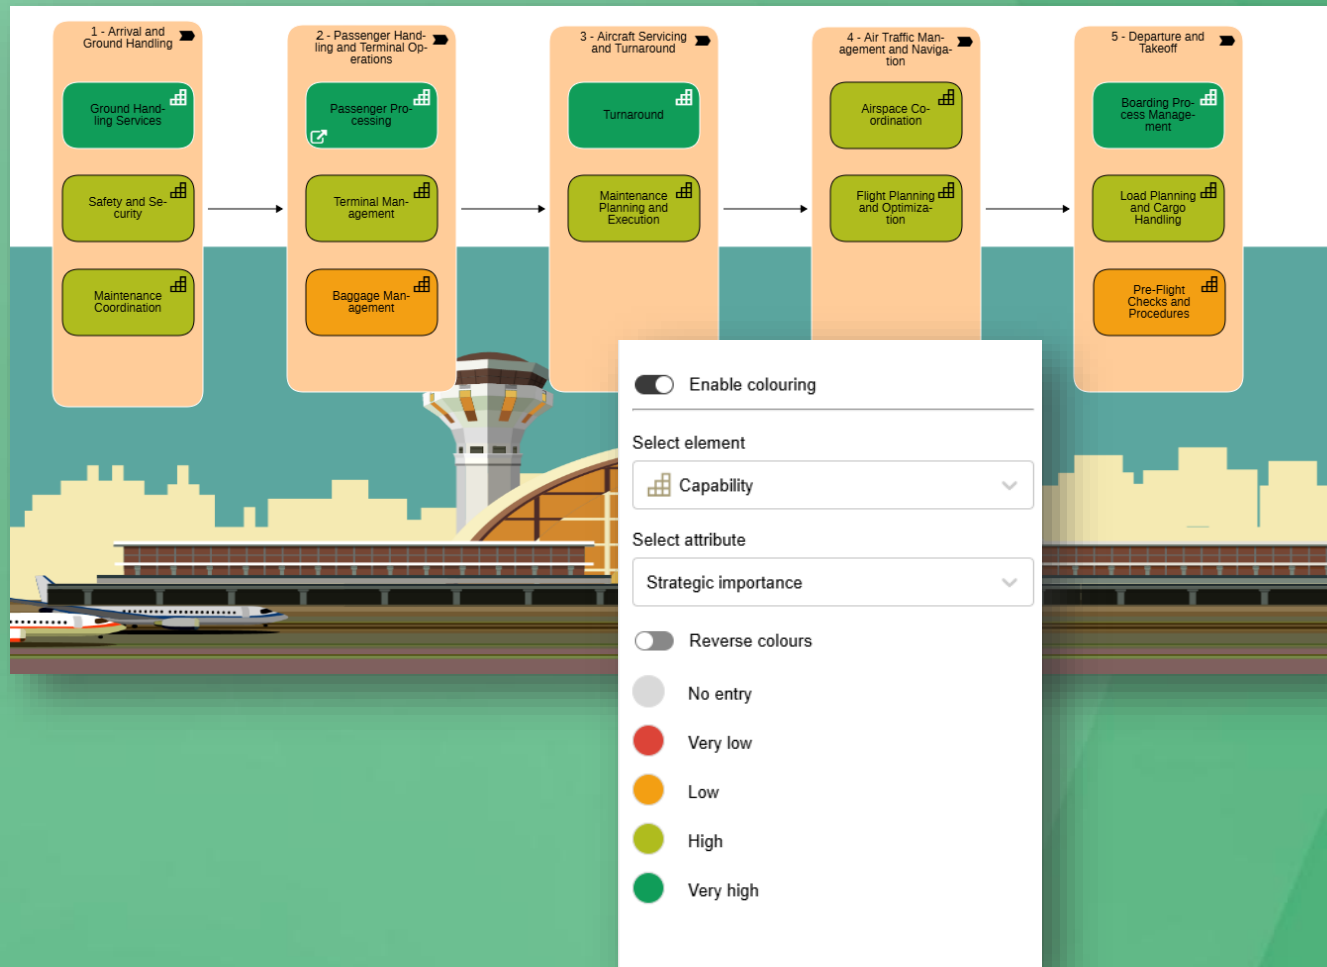

- Understand capability structure and dependencies
- Reveal improvement potential and key contributors

Why invest?

- Deeper knowledge leads to better decisions

3. Know Your Strengths

evaluate capabilities and identify business-critical gaps.

What you will achieve

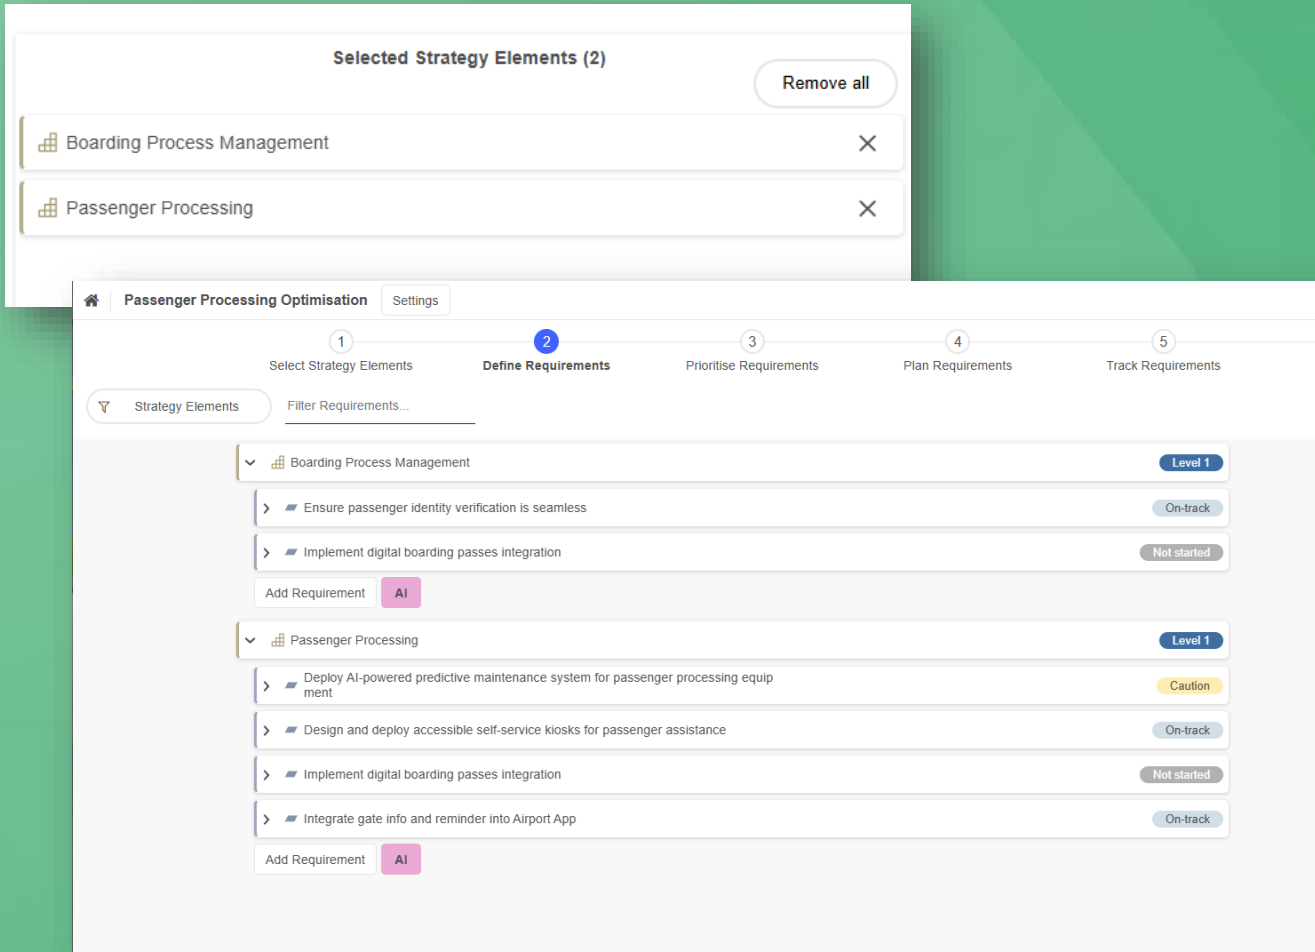

- Highlight high-impact areas for transformation
- Spot weaknesses and performance issues early

Why invest?

- Prioritize on what matters most

4. Define What Needs to be Done

capture and prioritize strategic capability requirements.

The screenshot displays the ADOIT software interface during the 'Define Requirements' phase of a project. The main window is titled 'Passenger Processing Optimisation' and features a progress bar with five steps: 1. Select Strategy Elements, 2. Define Requirements (current step), 3. Prioritise Requirements, 4. Plan Requirements, and 5. Track Requirements. Below the progress bar, there are two tabs: 'Strategy Elements' and 'Filter Requirements...'. The 'Strategy Elements' tab is active, showing a list of selected elements: 'Boarding Process Management' and 'Passenger Processing'. Each element has a 'Remove all' button next to it. Below the list, there are two sections for defining requirements. The first section, 'Boarding Process Management', shows a 'Level 1' requirement with two sub-requirements: 'Ensure passenger identity verification is seamless' (On-track) and 'Implement digital boarding passes integration' (Not started). The second section, 'Passenger Processing', shows a 'Level 1' requirement with four sub-requirements: 'Deploy AI-powered predictive maintenance system for passenger processing equipment' (Caution), 'Design and deploy accessible self-service kiosks for passenger assistance' (On-track), 'Implement digital boarding passes integration' (Not started), and 'Integrate gate info and reminder into Airport App' (On-track). Each sub-requirement has a status indicator (On-track, Not started, or Caution) and an 'Add Requirement' button with an 'AI' icon.

What you will achieve

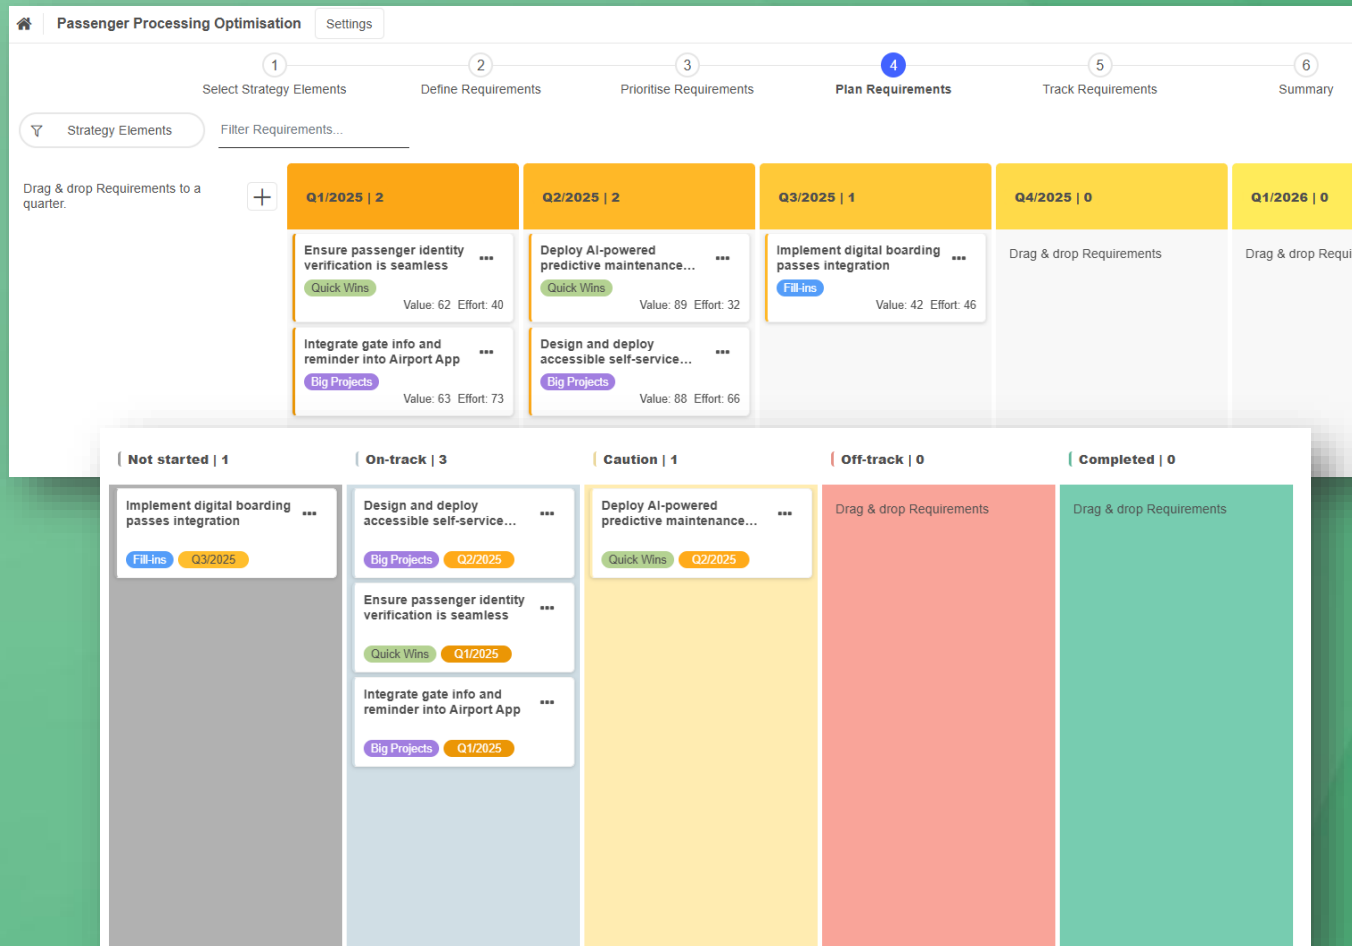

- Targeted improvements aligned with business goals
- Joint prioritization with business stakeholders

Why invest?

- Structured input turns planning into action

5. Plan and Track Progress

turn requirements into a roadmap with measurable milestones.

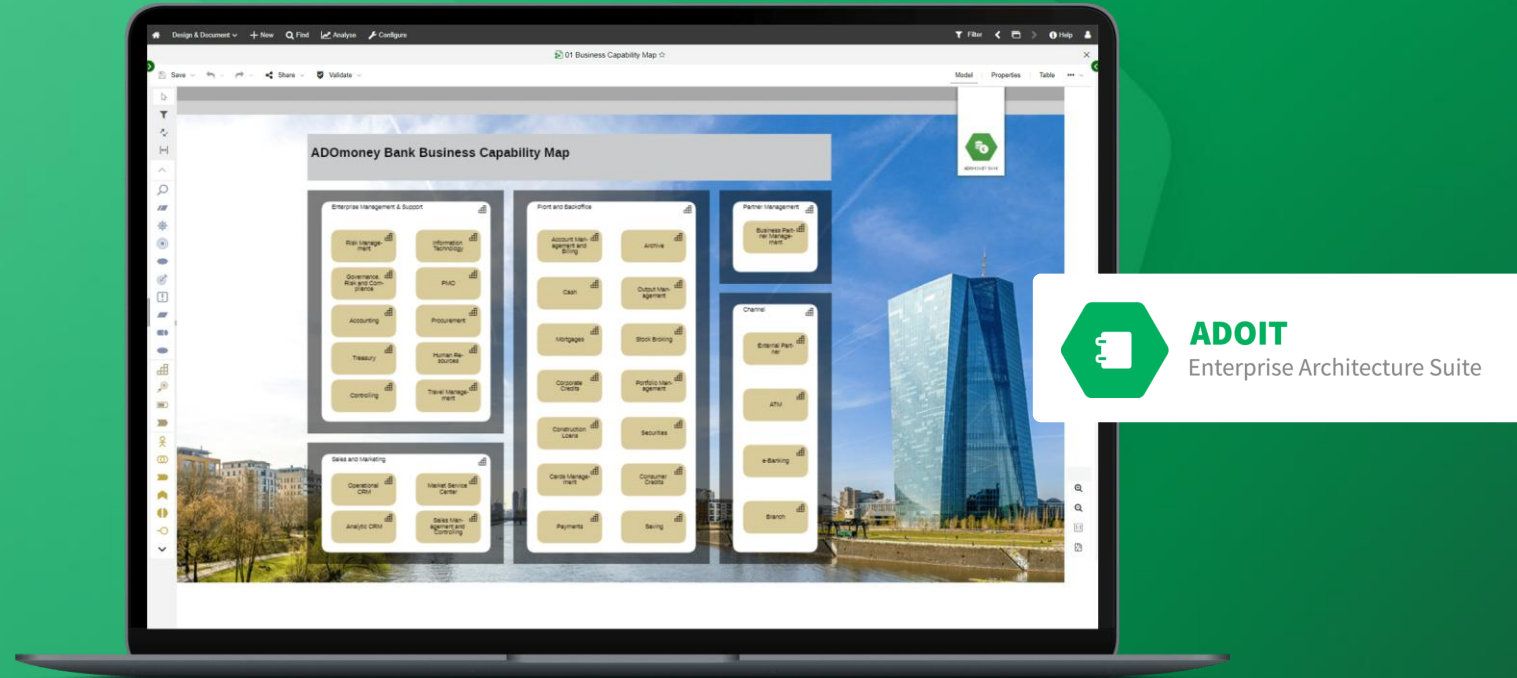

What you will achieve

- Clear execution timeline for transformation
- Progress tracking and delivery transparency

Why invest?

- Roadmaps drive consistent, strategic improvement
